

Parijat Omni Access – NGS-120

Parijat Omni Access or NGS-120, a software solution to virtualize applications, desktops and data, publishes applications and delivers remote and virtual desktops to any device supporting HTML5 enabled browsers, in your network, anywhere.

NGS-120 also works with hypervisors with Microsoft Remote Desktop Services, using MS CALs providing mobile users with a seamless experience in a secure environment and reducing IT costs. A simple solution empowering mobile workers with the freedom and flexibility to work how they want.

You may publish applications, manage MS Remote Desktop Session Hosts, (RDSH) and VDI-hosted applications and desktops. This can also serve to enable the desktop apps to emulate a web and or mobile solution as an alternative to making native applications.

Features:

- Supports a wide range of devices and workstations such as PC, Mac, Linux, Android, iOS, Windows Phone, ChromeOS, Raspberry Pi and thin clients
- Eliminates expensive licensing of traditional HMI, SCADA or other SW products
- Add as many client applications as you like, typically, limited only by RDSH, CALs.

Various deployment mechanism options are available:

1. Use the clients IT server infrastructure or Cloud
2. No need to install anything on the field mobile devices. Subscription service or Capex.
3. Install a small desktop client on the field remote devices. Capex.
