

Parijat Control System Auto Configurator – NGS-040

Parijat Control System Auto Configurator or NGS-040 is a purpose-built solution based on a pre-built system software infra-structure that will help auto configure a new control system.

Typical scenario – a control system is a very arduous & tedious manual work that requires a lot of very high skilled man-hours from conception to completion. This tool helps considerably reduce that effort & also intends to reduce manual data entry errors.

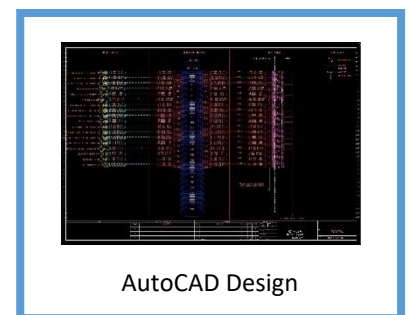

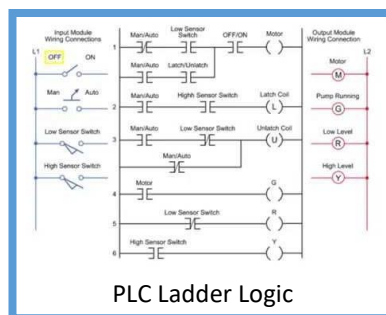

After entering the PLC, I/O & some basic repeatable control system object definitions in a MS SQL server, NGS-040 will create the AutoCAD panel drawings, PLC logic, HMI/SCADA system database, some displays which can be a starting point for the rest of the system.

Currently build with Rockwell Logix PLCs & Microsoft VS HMI/SCADA system. Contact us to help develop the infra-structure for your very specific needs.

Features:

- Serve as the project life cycle management of change facilitator.
- Single point of change for documentation, drawings, PLC programs & HMI.

Auto Configuration
