Parijat Remote monitoring, control and troubleshooting Appliance - NGS-180

Parijat Remote monitoring, control and troubleshooting Appliance, or NGS-180 is a comprehensive & affordable HW appliance to help diagnose, monitor and control remote sites using smart field devices like PLCs, VFDs, scales, HMIs, etc. NGS-180 appliance is agnostic to the protocol used & supports any serial & Ethernet protocols & any quantity of physical connections.

Problem: Typically to diagnose remote sites requires availability of a PC with pre-installed expensive licensed software for each different hardware at each site. NGS-180 empowers you to have the software needed to be installed at your local PC & use it with remote devices in a variety of HW configurations.

Possible Scenarios:
 Remote Site: Has internet or has VPN
  Remote Site: Has the required software or does not.
Required: broadband Internet connection at remote site, & at your PC.
The software that you intend to use on your PC must run natively in MS Windows XP or newer.

Support: At remote site, the PCI Appliance supports Ethernet, serial connection (you provide the appropriate hardware interface devices like USB to RS232/422/485 converters. Ensure the device drivers are properly installed & configured on NGS-180.
NGS-180 may be always connected or may be connected when needed at the remote site. In its base form, NGS-180 is supplied for office environment with 2 USB ports, 1 TCP port.
