

Parijat Database Replicator – NGS-070

Parijat Database Replicator or NGS-070, a software solution to replicate databases. One database may be MS SQL Server & the other one may be any other SQL compliant database.

You can link any field from source database to any field in the destination database. The data replication can happen under 3 scenarios:

- Manual request
- Use selectable time interval
- Programmatically when an event occurs

Features:

- Supports a wide range of databases using ADO.NET, ODBC etc.
- Define various rules, criteria for data transfers
- Eliminates expensive licensing of traditional HMI, SCADA or other SW products
- Appliance may not be needed in some of the scenarios.

Typical Applications:

1. Connect 2 different applications for data exchange
2. Connect Parijat Scada system data with some other external systems.
